

Checking 4L60E Line Pressure

What you should expect to see

In D: **55-65psi** Min. to **170-190psi** Max.

In R: **64-75psi** Min. to **300-325psi** Max.

Note: 1998 and later C & K trucks and G vans use a deep pan and filter assembly. If the early shallow filter is installed it will fall off causing low pressures and slippage. Check clearance between pan and filter. The pan is what retains the filter.
